

IAR WE430 首次使用简明指南

- 1- 建立工程,从时工程选项. Project/Options

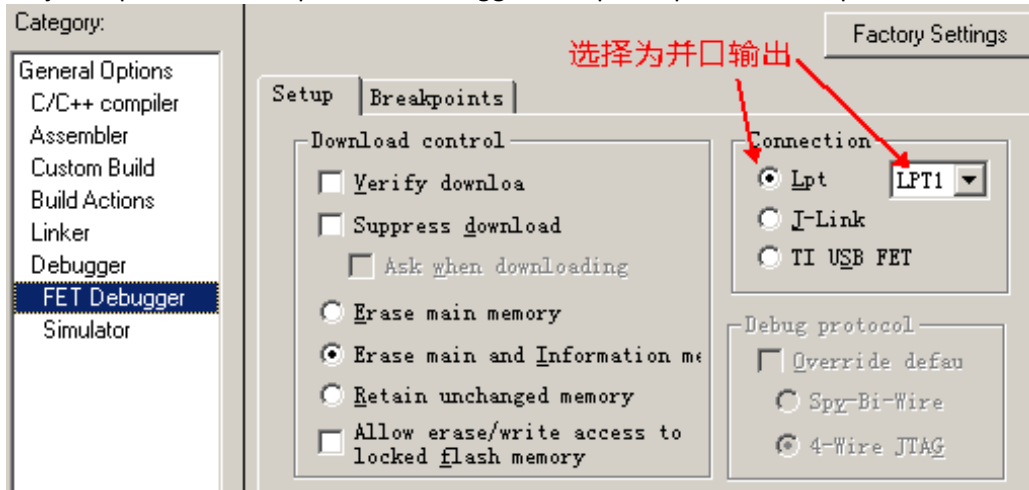

- 2- Project/Options/General Options/target/Device=MSP 430F147

- 3- Project/Options/General Options/Debugger/Setup/Driver=FET Debugger

4- Project/Options/General Options/FET Debugger/Setup/Setup/Connection/Lpt=LPT1

如果使用是并口则选用 LPT,如果是冰河 USB 接口仿真器则选 J-link, 如果是 TI USB 仿真器则选择 TI USB FET。

到此, IAR WE430 三个必要选项已设置正确。其它的暂时不必去选择。

5- 先对工程进行编译, 然后将程序进行下载到目标板上。

6- 开始仿真或直接运行...
